Mob: +91 8688718090

Professional Summary

Software Engineer with hands-on experience building production-ready Agentic AI systems and LLM powered applications. Certified in AWS Cloud and Generative AI, with practical expertise in Amazon Bedrock AgentCore, RAG pipelines, and multi-agent architectures to design autonomous, scalable AI workflows. Strong background in Python-based backend development and cloud-native deployments, delivering end-to-end solutions that reduce manual effort and improve business efficiency. Known for clear communication, ownership, and the ability to translate complex AI concepts into impactful, real-world systems.

Current Role: Sr. Associate – DES - AppDev **Current Designation: Sr. Associate – DES - AppDev**

Primary Skills: Python, LLMs, RAG, Agentic AI, NLP, Machine Learning, SQL, AWS, Docker, n8n, Flowise

Secondary Skills: Java, C++

Technical Profile

Technical Skills: Python, JavaScript, Java, C++, LLMs, RAG, Agentic AI Systems, Multi-Agent Architectures, LangChain, LangGraph, n8n, Flowise, Prompt Engineering, Autonomous & Human-in-the-Loop Agents, Memory-Augmented Agents, Flask, REST APIs, React, Android Studio, Figma, TensorFlow, Scikit-Learn, Numpy, Pandas.

Databases: MongoDB, SQL, VectorDB.

IDEs: Android Studio, VS Code.

Cloud Computing: AWS (Certified Cloud Practitioner), Microsoft Azure (Administrator & AI Fundamentals Certified).

Version Control: Git.

CI/CD: Docker, Kubernetes, CI/CD pipelines.

SDLC Methodologies: Agile, Waterfall, Dev Ops.

Additional Skills: Problem-solving abilities, Leading a Team, Analytical thinking, Strong communication skills.

Educational Profile

Bachelor of Technology in Computer Science and Engineering from Vellore Institute of Technology (VIT), Chennai (2025)

Certifications

Certified AWS Cloud Practitioner, Amazon Web Services

Microsoft Certified: Azure Administrator, Microsoft Azure

Microsoft Certified: Azure AI Fundamentals, Microsoft Azure

Key Responsibilities

- Involved in the full software development lifecycle from requirements analysis and technical design to coding, testing, deployment, and ongoing maintenance.
- Conducted Code Review, Check-In process and Code build.
- Collaborated with cross-functional teams in Agile environments to deliver high-quality AI and software solutions.
- Performed debugging, root cause analysis, and performance optimization to ensure system reliability and stability.
- Ensured proper documentation of features, workflows, and technical implementations to support maintainability and knowledge sharing.

Professional Experience

Project #1

Prod Sync Automation **Sutherland Global Services Pvt. Ltd., Hyderabad**
Senior Associate - DES - App Dev

ProdSync Platform is our flagship solution for automated deployment orchestration, integrating AI-driven intelligence with DevOps operations. It delivers unified deployment management with multi-environment support and natural language processing capabilities. ProdSync AgentCore provides industry-leading capabilities including natural language deployment requests, JIRA ticket integration, multi-tower routing, Jenkins pipeline orchestration, real-time monitoring, AI-driven insights, automated health checks, and intelligent rollback functionality.

Involved in full Software Development Lifecycle of project:

- Developed the platform using Python 3.11, FastAPI 0.109.0, React 18 with TypeScript, Vite 5.0.12, Tailwind CSS 3.4.1, shadcn/ui, Zustand 4.5.0, axios, lucide-react, react-hot-toast, boto3, pydantic, httpx, websockets, along with Git, Node.js 18, and npm.
- Implemented robust multi-tower deployment capabilities, encompassing Database Tower (Oracle to Cassandra migrations), Frontend Tower (React build pipelines), AppIntegration Tower (service deployments), and MiddleTier Tower (backend service orchestration).

- Designed the architecture with Amazon Web Services Bedrock AgentCore to enable intelligent deployment orchestration planning and AI-driven operational insights.
- Designed and developed core platform components, including the Deployment UI, Monitoring Dashboard, and scalable backend API services.
- Built comprehensive application modules such as DashboardPage with synthetic JIRA ticket visualization, DeploymentPage featuring natural language request input and execution plan rendering, and MonitoringPage providing real-time metrics and deployment history; complemented by a FastAPI-based mock backend exposing endpoints for deployments, JIRA tickets, tower management, environments, and monitoring data.

Client: Verizon

Project #2

Agentic AI System for QRF-to-BOQ Generation **Versalence Infocomm Pvt. Ltd., Bengaluru**
AI/ML Engineer **Jul 2025 to Sep 2025**

Developed an AI-driven system to automatically generate Bill of Quantities (BOQ) from structured Quotation Request Form (QRF) data, eliminating manual interpretation errors and significantly reducing estimation time. The solution leverages LLM-based semantic mapping to accurately extract, align, and populate engineering parameters such as technical specifications, load conditions, and design details into standardized BOQ templates. This approach ensures consistency, scalability, and faster turnaround for industrial building estimation workflows.

Involved in full Software Development Lifecycle of project:

- Built an QRF parsing and normalization pipeline using Python to convert semi-structured inputs (JSON/Excel/PDF/Images) into a standardized, machine-readable format.
- Integrated Gemini (LLM) for intelligent label-to-data mapping, enabling dynamic replacement of BOQ template values based on QRF semantics instead of hardcoded rules.
- Developed an Excel processing engine using Pandas, OpenPyXL to preserve BOQ structure while programmatically overwriting technical fields and clearing calculation sections.
- Designed a modular and scalable architecture supporting future extensions like BOQ calculations, STAAD integration, and RAG-based engineering inference.
- Implemented logging, debugging, checkpoints, and validation layers to ensure traceability, accuracy, and reliability of automated outputs.

Client: Sunil & Co. Prefabs and Engineering
